📱 INTERACTIVE PROTOTYPE CREATION

TaskMate – Student Task Manager App

🧠 Project Overview

This project focuses on creating a clickable prototype of a mobile application to simulate real user interactions. The prototype was developed using Figma based on previously designed wireframes.

🎯 Objective

- Convert static wireframes into an interactive prototype
- Simulate real-time navigation between screens
- Improve usability through testing and feedback

⚙️ Prototype Creation

The prototype consists of three main screens:

- Login Screen
- Dashboard Screen
- Add Task Screen

These screens were connected using Figma's prototype features to simulate real application behavior.

🔗 Interaction Flow

The navigation flow of the prototype is:

Login → Dashboard → Add Task → Dashboard

- Clicking **Login** navigates to Dashboard
- Clicking **(+) button** opens Add Task screen
- Clicking **Save Task** returns to Dashboard

🎬 Animations & Transitions

- Interaction Type: On Click
- Action: Navigate To
- Transition: Instant / Smart Animate

These transitions ensure smooth and user-friendly interaction.

🧪 User Testing

Method:

The prototype was tested with a few users (friends/classmates).

Tasks Given:

- Login into the app
- Add a task

Feedback Received:

- Navigation is simple and easy
- Buttons are clear and understandable
- Interface is clean

🔧 Improvements Made

- Increased button size
- Improved spacing between elements
- Added clearer labels

🧩 Design Thinking Process

Empathize: Users need simple task management
Define: Reduce complexity in task tracking
Ideate: Plan smooth navigation
Prototype: Created interactive design in Figma
Test: Collected feedback and improved design

🎯 Final Outcome

- Created a functional clickable prototype
- Achieved smooth navigation between screens
- Improved usability and user experience
- Gained knowledge in interactive design and testing
